Breast Biopsy

If you notice a lump or change in your breast, a biopsy may be needed. A biopsy may also be needed if you have an abnormal mammogram and breast cancer can’t be ruled out. A biopsy removes cells or tissue from the breast. This is the only way to find out if you have breast cancer. If you need to have a biopsy, don’t panic. Having a biopsy can be scary, but keep in mind most biopsies done in the U.S. do not show cancer.

Q: What type of biopsy will I have? Will the entire lump be removed or just part of it?
A:

Q: If you are recommending a needle/core biopsy, why? How accurate is this type of biopsy?
A:

Q: Who will do the biopsy?
A:

Q: How long will the biopsy take? Will I be awake? Will I feel anything?
A:

Q: Will I be able to go home the same day I have the biopsy?
A:
Q: Should I avoid any medicines before the biopsy and for how long? When can I start taking my usual medicines?
A:

Q: Will the biopsy leave a scar?
A:

Q: What are the possible side effects of the biopsy? How long will they last? What problems should I report to you (i.e., tenderness, pain, numbness along the scar)?
A:

Q: When will I be able to do my normal activities?
A:

Q: After the biopsy, how soon will I get the results?
A:

Q: If I have cancer, who will talk with me about my treatment options?
A:
