Since the 1980s, there have been significant improvements in treatment and overall breast cancer care. Unfortunately, improvement has not been equal among all populations. Many still suffer inequities, or disparities, from breast cancer and its effects, including high death rates.

Disparities are health differences in breast cancer outcomes among specific population groups, which may include, but are not limited to those associated with race/ethnicity, religion, nationality, socioeconomic status, age, sexual orientation, geography or disability. Komen is dedicated to reaching health equity. With support from the Fund II Foundation, Komen initiated the African American Health Equity Initiative, which aims to reduce African-American breast cancer disparities by 25% in 5 years, starting in the 10 metropolitan areas with the greatest breast cancer disparities.

African-American & Hispanic/Latina women are more likely to be diagnosed with advanced breast cancer than white women, and African-American women are about 40% more likely to die of breast cancer than white woman.

Mammography screening rates among American Indian and Alaska Native women are lower than rates among white, African-American and Asian-American women.

Uninsured women have lower rates of breast cancer screening and have more advanced breast cancer at diagnosis compared to women with health insurance.

Our Research Investment 1982–2018

More than $114 million in over 280 research grants and more than 170 clinical trials focused on breast cancer inequities

What We’re Investigating

Identifying the genetic, social and environmental differences that contribute to disparities in breast cancer outcomes in African-American women

Determining how patient navigation affects patient acceptance of recommended breast cancer treatment in minority populations

Testing a health care delivery program to optimize care and improve outcomes for African-American and low-income women

Graduate Training in Disparities Research

Komen has dedicated numerous resources to eliminating breast cancer inequities, including support of early career researchers through a dedicated grant mechanism - the Graduate Training in Disparities Research (GTDR) grant - which supports the training of graduate students who are pursuing a research career focused on breast cancer disparities.

Komen has funded:

33 grants that have supported more than 120 students pursuing careers focused on breast cancer disparities research.
